

BECO Y Ultrasonic Water Meter

BECO Y is the latest from Bove . The product has thoroughly realized its design concept “Every Drop Measured”, with a start flowrate as low as 3 l/h and measuring ratio upto R800.

Specifications

BECO Y. is the latest from Bove . The product has thoroughly realized its design concept “Every Drop Measured”, with a start flowrate as low as 3 l/h and measuring ratio upto R800. BECO Y is made of nature-friendly composite material and suitable for residential, households, apartment buildings, and small commercial premises. Through the special flow pipeline design, BECO Y is different from the traditional mechanical water meter in that it does not need any straight pipe sections — U0/D0 makes it applicable to pipes in almost any scene. Bove Technology has been committed to the field of ultrasonic measurement and is an expert in low-power WAN communication. At the same time, BECO Y not only supports wired communication in the traditional sense but also supports three mainstream wireless low-power WAN communication: LoRaWAN, Sigfox, and NB-IoT. All the above schemes make BECO Y easily integrate into AMR, AMI, DMA, and other metering solutions.
